. . . first-rate student learning environments.

Survey questions and criteria examined and scored areas of digital and emerging technologies, such as use of mobile devices and technology integration into curriculum; strategic planning and data management; and professional development, including availability of technology tools and training for faculty and students.

In addition, colleges were surveyed on their technology priorities, infrastructure and networks, collaboration and outreach efforts and use of technology innovations.

“Community colleges across the country are employing technology in exciting ways to develop unique learning environments on campus and to expand online learning opportunities 24/7,” said Alan Cox, Senior Vice President for the Center for Digital Education. “Many of the colleges honored this year have employed various technologies and social media to improve resources to further instructional goals. We are honored to acknowledge these community colleges’ technology advancements!”

All accredited U.S. community colleges are eligible to participate in the survey within the three classifications based on size of enrollment. To register for notification of next year’s survey, visit <<http://www.centerdigtaled.com/RegistrationAwards>>.

CDE thanks Sprint for underwriting the survey and for their support of community colleges across the nation.

Examples from the colleges who placed first in each student-enrollment-based classification include:

- Johnson County Community College, Kan. provides Learning Studios, a unique learning environment that allows instructors to explore technology-enhanced learning spaces that include wireless access, a mobile podium, interactive white boards and projection, and “wall-talker” wall covering. They have overhauled their network infrastructure to support students’ personal devices—providing faster and greater bandwidth, wireless, video, and voice technologies—as well as increased survivability of the network.
- Lord Fairfax Community College, Va. produces revenue for technology projects from its digital signage application that allows purchase and display of ads on over 30 displays campus-wide. The college also has an Instruction Space Design Team that reviews all spaces on campus for technology ideas and environment improvements to meet the learning objectives of students and faculty.
- Carl Sandburg College, Ill. has expanded its TechConnect three-day faculty training workshop on the most innovative technologies used on campus into weekly workshops for faculty and staff throughout the year. In addition the college partners with the local

Workforce Investment Act office, the City of Galesburg and economic development organizations to provide education and job training services to displaced workers and students coming back to upgrade their skills.
